

Safeture makes safety simple through smart technology

Guided by a strong purpose to prevent harm and help save lives, Safeture develops technology for your risk and crisis management.

Safeture was founded in 2009 by Lars Lidgren, Professor emeritus in Orthopaedics at Lund University, after experiencing poor disaster information during the SARS epidemic, Mumbai terror attacks, and Indian Ocean Tsunami. Today, Safeture's world-leading technology is used by over 4000 companies and organizations to protect what matters most – their people.

Automate risk and crisis management

The Safeture platform automates your risk and crisis management through the combined power of information, location, and communication.

The system sorts out relevant alerts based on employee location, delivering accurate and reliable risk information to act on.

Information

Take actions based on the best risk intelligence.

Location

Find all your people when necessary.

Communication

Deliver messages even in the most critical times.

Safeture platform

Advanced technology, easy to use.

The platform consists of two interfaces – a web portal and a mobile application.

The web portal is your primary safety management tool as an administrator, providing a real-time overview of essential security data for your organization.

As an employee and end-user, the interaction with the Safeture platform is through the mobile application.

- Get relevant alerts of nearby incidents based on location.
- Quickly communicate with the manager or assistance provider in case of an emergency.

We believe in the power of strong partnerships.

We can offer a complete, seamless solution to our customers through partnerships with companies working with security and medical assistance, travel, insurance, and risk intelligence.

Our strategic positioning as a stand-alone, content-agnostic platform gives you the freedom to choose what content and data to integrate into the system.

Security Overview

Real-time overview of the risk situation

Mobile Application

Safety in the palm of your hand

Communication

Reliable communication in critical situations

Travel

Complete travel risk management solution

Risk Intelligence

Relevant risk information at the right time

Facility

Alerts for facilities and connected people

Analytics

Unify data between systems

E-Learning

Educate and prepare your people

We handle your data in accordance with the highest security standards.

Safeture's Information Security Management System is based on the ISO/IEC 27002:2013 and fully GDPR and CCPA compliant – trusted by large, multinational organizations such as Siemens and the European Central Bank. Protecting your data is our top priority.
