SAFETURE®

Connecting your TMC

A Quick Guide

TMC (Travel management company) integration is one integration with several feeds to differentiate the PNR (Passenger Name Records) for respective markets.

There are three different ways for Safeture to get the PNRs: GDS (Global Distribution Systems) API-integrations and SFTP solution.

After an introduction to your TMC, Safeture takes care of the rest. We handle it all seamlessly together with the TMC. From setup to going live, requiring minimal effort on your part.

You are the controller of your company's travel data and with the TMC integration, Safeture becomes an approved processor.

1. Introduction of Safeture and partner to your TMC

Sabre · American Express Global Business Travel · Ctrip · BCD travel · amadeus · EGENCIA · BERGHANSEN · TRAVELPORT · CWT · perk+

2. After the introduction, Safeture set up the connection. The choice of technical solution affects how long this process takes. API is the fastest way to build the integration, GDS involves more extensive work.

3. Safeture oversees the testing, making sure all processes work.

4. Partner and you decides when to go live.

5. The integration is live!
