SAFETURE®

Safety Check:

Saving Time & Money for Assistance Providers

Assistance companies operate under constant pressure: limited resources, unpredictable incident load, and clients expecting rapid clarity.
Safety Check turns chaotic outreach into a structured, automated workflow — meaning faster triage, fewer unnecessary deployments, and lower operational costs.

Instant Outreach = Massive Time Savings

Safety Check delivers immediate multi-channel communication (push, SMS, email, voice).

Assistance teams no longer waste hours compiling lists, sending manual messages or calling through travellers one by one.

You reach everyone in seconds and see responses in real time.

Clear Status Overview = Faster Triage

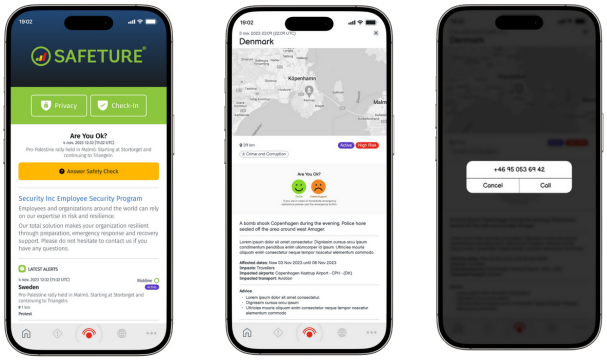
The interface shows who is safe, who hasn't answered, and who needs help — instantly.

For assistance teams, this eliminates guesswork and unnecessary follow-ups.

You spend time acting, not searching.

Automated Triggers Reduce Manual Work

Premium tier functions like dynamic enrolment and automatic Safety Check triggers kick in the moment an alert passes a threshold.
No need for staff to recognise the incident, compile affected lists, or start outreach.
Automation = fewer working hours spent per incident.



Avoid Over-Deployment of Resources

When you know exactly who needs help, you avoid mobilising costly support teams "just in case."
The result is fewer unnecessary medical/ security dispatches, lower logistical costs and better utilisation of scarce assistance personnel

Built-in Case Handling Reduces Admin Cost

Safety Check logs all interactions, statuses, escalation notes, and timestamps directly in the platform.

Assistance teams avoid maintaining spreadsheets, manually documenting timelines and reconciling communication threads
Everything is centralised, traceable, and audit-ready.

Two distinct packages are available, each designed for different requirements.

Contact sales@safeture.com

The BASIC package provides a practical, manual tool for organizations needing a straightforward solution during disruptive events.

The PREMIUM package is intended for organizations with higher compliance demands or the need for automation, voice communication, and advanced reporting.
