# SAFETURE®

SAFETURE WEB PORTAL

Real-time overview of all your security data.

✓ Travel risk management

One single access point to keep track of all travel information through integration with any Travel Management Company (TMC) or Global Distribution System (GDS).

✓ Risk Intelligence

Take action based on relevant and timely insights. Risk intelligence emerges from a systematic process where raw data is collected, analyzed, assessed, and filtered out based on location.

✓ Open platform

Safeture's open platform is built to easily fit your current system architecture. Integrate data from your existing content providers or add providers from Safeture's marketplace.
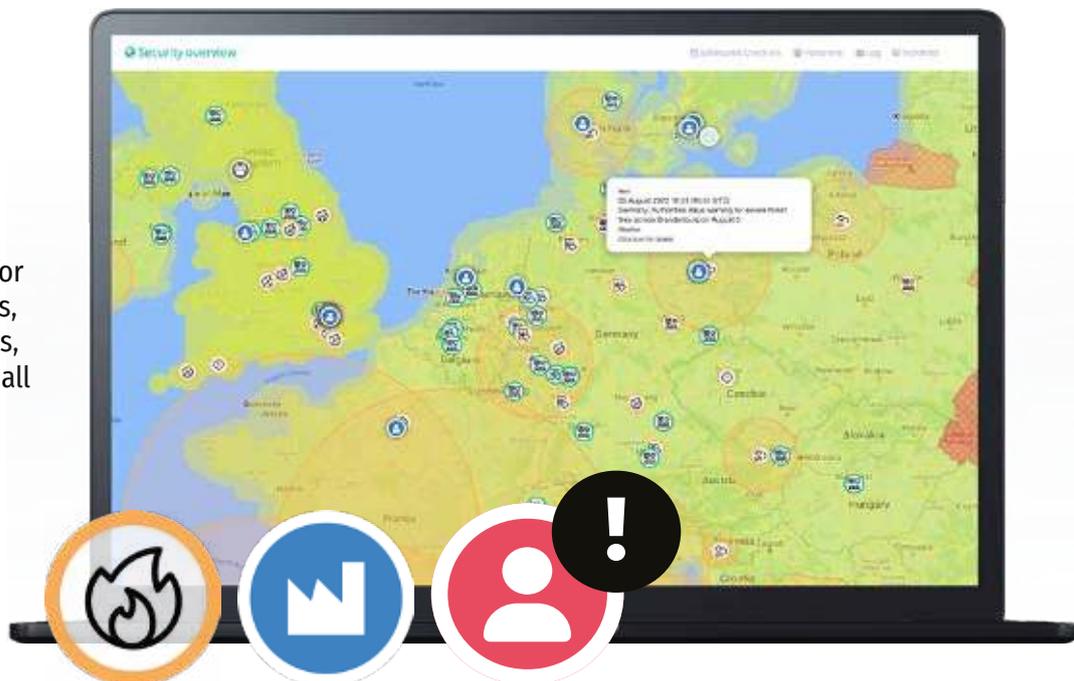

✓ Highest data security standards

Safeture's policies, processes, and technology enable us to comply with and exceed industry standard requirements in regard to data security.

Safeture AB Kung Oskars väg 11 C, 222 35 Lund, Sweden **www.safeture.com**

Safeture Web Portal

Security overview:
Real-time map overview of the risk situation.

Global risk information for your people and facilities, country risk assessments, alerts, travel warnings – all on the same map.

Dashboard:
Dynamic display of all your current threats.

Relevant information about events requiring your action. See who has initiated emergency mode, is located near any incident, or has missed a scheduled check-in.

Facility module:
Protecting people at both dynamic and static locations.

The Facilities module lets you add fixed locations to the system and safeguard all people working on-site.

Communication module:
A reliable way to communicate in critical situations.

We deliver your message at the most critical of times by using multiple communication channels and our patented routing engine.

FAQ

Which are the alert risk levels?
All alerts published in the Safeture Platform are assigned either a low, medium or high severity level and one or more of the 21 alert categories.

Will you inform me if a user is near an alert?
The system will detect any user that is close to the event and administrators can be informed both via SMS and email.

Can Administrators send alerts?
Yes. By using the Custom Alerts feature you can create a new alert with a title, category, severity (low, medium, or high risk), text about the event, advice on how to act, a location, and selected affected countries.
